Abstract of JP9204426

PROBLEM TO BE SOLVED: To provide a method for editing data with superior operability and editing efficiency.
SOLUTION: An input/display tablet 4 is brought into contact with a pen at a point on an area 13 so as to decide the editing of the area 13. Then, an editing icon 14 for editing is displayed. Then, the pen is moved without detaching it from the tablet 4 and it is made to pass through one of plural areas in the icon 14. Thus, an editing processing corresponding to the passed area is recognized to be selected. When the pen is detached from the tablet 4, the recognized editing processing is executed on the area 13.
